Documentation

Users Guide & Installation Guide

User's guide & Installation guide for the current GATE release can be found **here(https://opengate.readthedocs.io/en/latest/).**
We warmly recommend to use the latest GATE release when available.

For the next release (GATE 10), already available in beta, user and installation guide can be found **here(https://opengate-python.readthedocs.io/)**.

Documentation with ReadTheDocs

User documentation frequently evolves so members of the OpenGATE collaboration have set up ReadTheDocs toolkit to help them work more efficiently with such a dynamic content. You can easily propose modification in any page of the documentation by using the '**edit on GitHub' button** from the small menu in the bottom right corner of the page **('v:latest')**. It will open an editor to make modification that may be then submitted by using a **Pull Request**. Once reviewed and validated by the Gate dev team, the modification will be available for everyone.
